

Nama : Ahmad Putra Cahyo
NIM : 21120124140143
Kelas : D
Matkul : Pemrograman Dasar
Dosen Pengampu : Ilmam Fauzi Hashbil Alim, S.T.,M.Kom.

Ujian Akhir Semester Pemrograman Dasar

Jawaban :

1.

Source Code :

```
def hitung_tagihan_listrik(golongan, daya, pemakaian):  
    if golongan == 'R1' and daya == 1300:  
        tarif = 800  
    elif golongan == 'R1' and daya == 2200:  
        tarif = 1300  
    elif golongan == 'R2' and daya == 3500:  
        tarif = 1500  
    else:  
        return "Golongan atau daya tidak valid."  
    return tarif * pemakaian  
  
# Input  
golongan = input("Golongan: ")  
daya = int(input("Daya: "))  
pemakaian = int(input("Pemakaian (kWh): "))  
  
# ini output  
print("Tagihan: Rp", hitung_tagihan_listrik(golongan, daya,  
pemakaian))
```

```
Users > al-birra > Documents > Cahyo > TugasUAS.py > ...
1 def hitung_tagihan_listrik(golongan, daya, pemakaian):
2     if golongan == 'R1' and daya == 1300:
3         tarif = 800
4     elif golongan == 'R1' and daya == 2200:
5         tarif = 1300
6     elif golongan == 'R2' and daya == 3500:
7         tarif = 1500
8     else:
9         return "Golongan atau daya tidak valid."
10    return tarif * pemakaian
11
12 # Input
13 golongan = input("Golongan: ")
14 daya = int(input("Daya: "))
15 pemakaian = int(input("Pemakaian (kWh): "))
16 |
17 # ini input
18 print("Tagihan: Rp", hitung_tagihan_listrik(golongan, daya, pemakaian))
19
```

Output :

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS
/usr/local/bin/python3 /Users/al-birra/Documents/Cahyo/TugasUAS.py
al-birra@192 ~ % /usr/local/bin/python3 /Users/al-birra/Documents/Cahyo/TugasUAS.py
Golongan: R1
Daya: 2200
Pemakaian (kWh): 1500
Tagihan: Rp 1950000
al-birra@192 ~ % /usr/local/bin/python3 /Users/al-birra/Documents/Cahyo/TugasUAS.py
Golongan: R2
Daya: 3500
Pemakaian (kWh): 1500
Tagihan: Rp 2250000
al-birra@192 ~ %
```

2.

Source code :

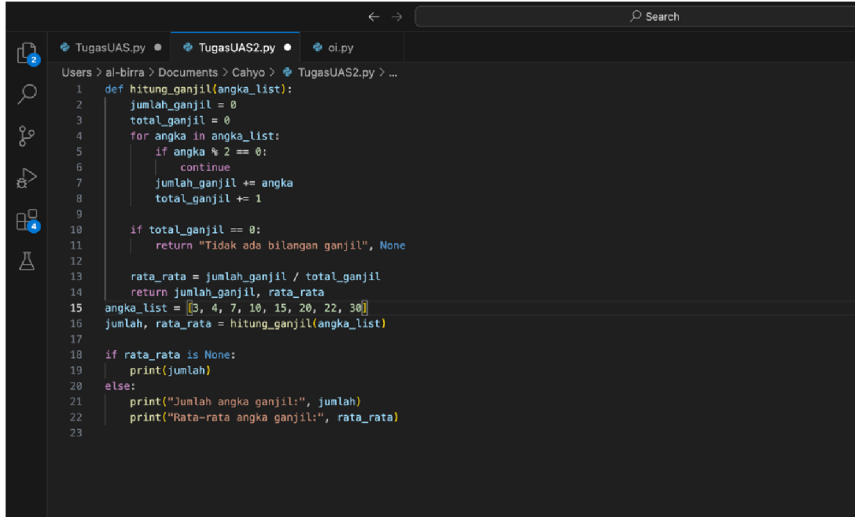

```
def hitung_ganjil(angka_list):
    jumlah_ganjil = 0
    total_ganjil = 0
    for angka in angka_list:
        if angka % 2 == 0:
            continue
        jumlah_ganjil += angka
        total_ganjil += 1

    if total_ganjil == 0:
        return "Tidak ada bilangan ganjil", None

    rata_rata = jumlah_ganjil / total_ganjil
    return jumlah_ganjil, rata_rata
```

```
angka_list = [3, 4, 7, 10, 15, 20, 22, 30]
jumlah, rata_rata = hitung_ganjil(angka_list)

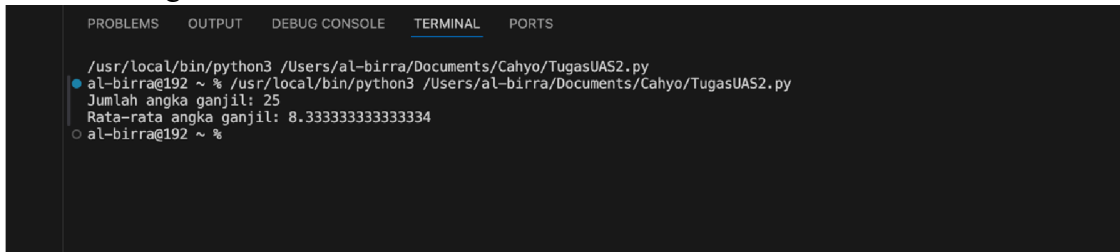

if rata_rata is None:
    print(jumlah)
else:
    print("Jumlah angka ganjil:", jumlah)
    print("Rata-rata angka ganjil:", rata_rata)
```

The screenshot shows a code editor with a dark theme. The file explorer on the left shows three files: TugasUAS.py, TugasUAS2.py, and oi.py. The main editor window displays the following Python code:

```
1 def hitung_ganjil(angka_list):
2     jumlah_ganjil = 0
3     total_ganjil = 0
4     for angka in angka_list:
5         if angka % 2 == 0:
6             continue
7         jumlah_ganjil += angka
8         total_ganjil += 1
9
10    if total_ganjil == 0:
11        return "Tidak ada bilangan ganjil", None
12
13    rata_rata = jumlah_ganjil / total_ganjil
14    return jumlah_ganjil, rata_rata
15 angka_list = [3, 4, 7, 10, 15, 20, 22, 30]
16 jumlah, rata_rata = hitung_ganjil(angka_list)
17
18 if rata_rata is None:
19     print(jumlah)
20 else:
21     print("Jumlah angka ganjil:", jumlah)
22     print("Rata-rata angka ganjil:", rata_rata)
23
```

Hasil Running :

The screenshot shows a terminal window with the following output:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS
/usr/local/bin/python3 /Users/al-birra/Documents/Cahyo/TugasUAS2.py
al-birra@192 ~ % /usr/local/bin/python3 /Users/al-birra/Documents/Cahyo/TugasUAS2.py
Jumlah angka ganjil: 25
Rata-rata angka ganjil: 8.333333333333334
al-birra@192 ~ %
```
